412 sumi). These sieves are identical with those of the Neobrazilians and are probably borrowed from them. The original type of Tukuna sieve is perhaps the round one found occasionally even today; it fits better in the mouths of the jars used in straining the pulp from which beverages are made, the original purpose of these sieves.

The paddle for stirring manioc flour in the oven is the same as that used by the [171] Neobrazilians—a small board attached to a long stick, if it is not just some old canoe paddle. For turning cassava (*mandioca*) cakes in the oven the Tukuna use a small board shaped like a segment of a circle, almost invariably a broken section [285] of an old canoe-paddle blade. Flour is kept in cylindrical openwork baskets woven [251] of uarumã in an open-mesh technique, lined with leaves that also seal the top, and tied by a plait of eipó. This is the common form also used by the Neobrazilians.

In the kitchen there are always a number of small four-legged benches, ȵu/ma'vɨ 352 (fig. 4, b), rectangular or oval in shape, each carved entirely from a single piece of wood. Sometimes they are made in the form of a tortoise, *jaboti* (*Emys tabulata*) (pl. 9, c), and they are always made with some cunning. They are never more than [362] ten centimeters high. These benches are used exclusively by men while partaking of refreshments, whereas the women sit on the floor.

356 *Cleanliness.*—The house as well as the kitchen is usually clean, since both are swept out at least once daily with a broom made of the leaf ribs of small *tucumã* leaves left over from the fibers used in making thread. The Tukuna do not tolerate a stink in the house or in the kitchen. They immediately remove excreta of domestic [412] animals or of small children, including the soiled portion of the earth, with the [231] point of a short, broad blade.[1] This scrupulousness is the main reason why these Indians have a distaste for raising chickens and never keep pigs.

[136] Neither dog fleas nor chiggers (*Pulex penetrans; bicho de pé*) become annoying in Tukuna houses, but cockroaches, crickets, and tracuá ants are most disagreeable. These last, above all, immediately swarm over any food not on the grill while the fire is burning and invade baskets and trunks with irritating persistency. The Indian chief Calixto daueru'kɨ fought this plague in Igarapézinho by thrusting thick reeds, open at one end, into the house thatch. In a short time the insects would build their nests in these reeds and, when the reeds were filled, he would shake them out over the fire and again insert the reeds in the thatch.

Communication between Settlements

487 Formerly, communication between isolated settlements was mainly by land, since the Tukuna, in contrast to the Omágua, were foot Indians, not canoe men. All the igarapés (tributaries of the left bank of the Solimões) inhabited by these Indians were connected by trails; likewise the different houses along a particular igarapé. Castelnau mentions these paths,[2] which connected the Tukuna habitations of the interior from Caldeirão (Belém) to Tabatinga and Loreto. With the development of navigation many of these trails were abandoned, although some are used even today.

501 Originally, the Tukuna practiced little navigation, being isolated in their jungle 177 centers on solid ground by the Omágua, their superiors in warfare. They had only

[1] Terçado, lit., a short, broad sword; probably the machete or *facão*.—Trans.
[2] Castelnau, p. 50.

861 More than among other tribes, *Tucuna* children receive corporal punish-
824 ment, especially with the external application of nettle flowers that are grown for this purpose at the edge of the yard. They play with dolls
524 carved of muirapiranga, figures of animals, little canoes, small bows and arrows, and buzz-disks of gourd shells.

173 **Boys' puberty observances.**—There is a tradition that in former times,
881 young men were initiated when their voices changed, being secluded and then perhaps formally admitted to the secrets of the megaphone (tá/ki) through an application of snuff called ká/vi, which is still used occasionally.
114 There are no vestiges of homosexuality, as claimed by Tessmann (1930,
838 p. 563).

881 **Girls' puberty rites.**—At her first menstruation, a girl is secluded in the house loft. This is not so cruel as certain travelers (Bates, 1863, 2:406)
[114] proclaim. Every girl submits willingly, convinced that her peculiar condi-
[626] tion requires it and that its omission would be dangerous, as she is surrounded by invisible "immortals" and demons, who seek contact with her and at times cause extraordinary supernatural experiences. Many stories told to a girl in seclusion illustrate this dangerous state.

[342] The people hasten to prepare for the girl a circular seclusion room adjacent to the east or west wall of the house, according to her moiety.
[532] They decorate the walls with painted bands and lines, and figures of the sun, moon, morning star, and deer, the last a symbol of vigilance and not a "totem."

[262] Preparations for the feast sometimes require months. They prepare roast meat and beverages and make the house ready. The girl's father is host, but her paternal uncle and his wife direct all ceremonies concerning
[574] her person, being wholly responsible for her. Friends and acquaintances
[202] receive two invitations to the feast; the second, which specifies the date,
[534] is issued to the sound of the bark trumpet, which is carried hidden in the canoe.

In the exterior portion of the house, corresponding to the girl's seclu-
[534] sion room, a long fence is made with straw walls to conceal the megaphone (tá/ki), its statues, and the bark trumpet which operate behind it each night of the feast and are removed before daybreak and hidden underwater in the creek. People are chosen and invited to operate these instruments by the head of the house when the time comes; there is no permanent assignment. Inside the fence of the megaphone, snuff (ká/vi) or tobacco
[276] powder is taken with several ingredients (but not parica). The snuff is kept in a snail shell and blown into the nose by means of an apparatus made of a tubular bone and two quills of royal sparrow hawk feathers, or by means of a simple taboca (bamboo) tube. Boys of 7 or older cus-
[562] tomarily are given snuff, after which they may see and touch the instru-
[858] ments within the fence, which are taboo to women and to boys who have not yet had it.
